Ref: Palmira Lakes/ Cane Toad Tadpole Control

Visit was completed during the daytime on March 31st. The map below will show lakes that we are currently monitoring. There was approximately 7.5 gallons of Cane toad tadpoles removed from the lakes on this day. If residents notice any lakes with a high level of tadpoles while they are golfing, please let us know which lakes so we can get on them as soon as possible. We will also keep a close watch on the lakes while working Cane toads at night for the HOA. We are expecting tadpoles to continue to emerge throughout April.

Invoice attached, pictures below.
